

TENGERU INSTITUTE OF COMMUNITY DEVELOPMENT (TICD)

RESEARCH PROPOSAL / DISSERTATION WRITING GUIDELINES

April 2019

PREFACE

Tengeru Institute of Community Development curriculum for master's degree students requires dissertation preparation and writing as a pre-requisite for completion of the master's degree programme. Prior to dissertation report writing both a research concept note and research proposal should be prepared, defended and awarded by the panel appointed by the head of department of Post Graduate Studies, Research and Consultancy. Both the concept note and proposal will act as a pivot and axis for data collection, process and hence dissertation preparation.

It is therefore, pertinent that master's degree students should prepare their theses adequately with respect to the TICD dissertation writing format and guideline. Thus it is obvious that this document will help students to organize, and prepare their proposals and their theses. It is therefore envisaged that all students as well as trainers will adhere to these guidelines as failure to which may lead into delay in completion of the master's degree programme on the part of the student.

It should also be noted that though this guideline is necessary tool in preparation of research proposals and dissertation, but not sufficient in actual scientific writings. Thus students are also advised to consult relevant research books and or other research methodology experts to cover the gap. This document is the first edition that is expected to last for three years after which its review is expected to be affected. The document is relevant as it provides a roadmap for master's students in their course of research proposals and dissertation writing.

Dr. Hamis Kingu

Deputy Rector: Academics, Research and Consultancy

PREFACE	2
Table of Contents.....	3
PART A: CONCEPT NOTE AND RESEARCH PROPOSAL	1
1.0 Introduction	1
2.0 Concept note	1
2.1 The Structure of a Concept Note	1
3.0 Research Proposal	2
3.1 Major Components of Research Proposal	2
3.1.1 Chapter One: Introduction	2
3.1.2 Chapter Two: Literature Review	6
3.1.3 Chapter Three: Methodology.....	7
PART B: TYPESCRIPTS AND LAYOUT	8
1.0 Components of the dissertation.....	8
2.0 Sequence of the Research report (dissertation)	8
3.0 Dissertation topic	9
4.0 Chapter Four: Data Presentation, Analysis and Discussions.....	9
5.0 Chapter FIVE: Conclusions and Recommendations	9
PART C: FORMATTING AND REFERENCING GUIDELINE.....	11
PART D: THE PROCESS OF DISSERTATION SUBMISSION.....	16

PART A: CONCEPT NOTE AND RESEARCH PROPOSAL

1.0 Introduction

Research is such a significant academic paraphernalia and inevitable activity in any higher learning institution. The main purpose of its undertaking is to academically and professionally, explore new areas, expounding relations and disparities, between and among variables and hence describing, and analyzing concerns and events while explaining their phenomenology. Questions are systematically asked and hypotheses tested, whenever investigations of situations are conducted in order to avoid self deception.

Critical examination of any given phenomenon follows a diligent scientific inquiry. It is an exhaustive study, investigation or experimentation that adheres to logical sequence. The main aim of research is to discover answers to problems and fill the gaps based on empirical evidence.

2.0 Concept note

A concept note is meant to give an idea of your area of research interest in order to avail the necessary assistance for the researcher to develop a research proposal. Be as specific as possible in providing information.

2.1 The Structure of a Concept Note

1. Title of Proposed Study (also reason for choice)
2. Area of Study (also reason for choice)
3. Background to the Study: (What have you read that has had an impact on your thinking about the topic?)
4. Statement of the Problem (What is the gap in knowledge? Why does this research need to be conducted?)
5. Objectives of the Study (What does the study hope to achieve?). Objectives have to be specific and if provide numbers, it will be more helpful.
6. Questions and/or Hypotheses (State the unknown in terms of questions or in terms of solutions).
7. Literature Review: What literature do you intend to review and why?
8. Theoretical Framework (What theory(s) will you use in analyzing your material? Why those/that theory?)
9. Proposed Research Design, Methods/Procedures (This answer the question, "How will you conduct the study?")
10. References

The research concept note should not exceed five typed pages, Times New Roman font 12, centrally justified, double spaced, excluding references.

Students will be required to submit their concept note for presentation and comment for further step.

3.0 Research Proposal

Generally, a research is a pursuit for knowledge through experimentation, investigation and diligent search. It is aimed at discovery and interpretation of new knowledge or at resolving debatable existing knowledge. There are systematic procedures and methods for explorations, targeted at obtaining new knowledge. At the level of professional academia, we have a pursuance for learning more and looking beyond what is written, and contributing a little to the field we plan to dedicate our lives to. The starting point of a research is to think of a good idea. Your research is as good as your idea.

Before starting any long term or complicated task, it is wise that we make a rough plan or a map which will guide us throughout the course of the research activity. In the same way, before the commencement of our research, we need to devote time and think logically on the area of our research and how we are going to go about it.

Professional universities demand that before carrying out the research project or dissertation, the researcher submits a research proposal. The purpose of the research proposal is to convince the research committee that the researcher has chosen the topic after great consideration, carried out sufficient preliminary reading on the topic, possesses sound information of the issues involved and is capable of providing broad details of the area under investigation.

3.1 Major Components of Research Proposal

3.1.1 Chapter One: Introduction

a) Background of the Study

The first section of the project should be an 'introduction' or 'background' of the project where you can state the problem you are trying address and also explain what are the root causes of this problem. You can conclude this section with the 'opportunity' available for you to make the intervention and address the problem. Usually, the 'opportunity' can be in form of your own skills that can used to reduce the problem or a government policy. The background of the study sets the tone of the proposed study giving context of the research. Remember to give references in your narrative so that you can establish authority to the facts given. For example, if the researcher explains that there is extensive poverty in the region, he/she needs to supply some data and a reference. Also, try to give numbers in terms of men, women and children getting affected from the overall situation. In this way,

you can ensure that gender has been integrated from the planning stage itself. It should convey the importance of the research.

b) Statement of the Problem

The first and most important step in any research is to identify and delineate the research problem: that is, what the researcher wants to solve and what questions he/she wishes to answer. A research problem may be defined as an area of concern, a gap in the existing knowledge, or a deviation in the norm or standard that points to the need for further understanding and investigation. Although many problems turn out to have several solutions (the means to close the gap or correct the deviation), difficulties arise where such means are either not obvious or are not immediately available. This then necessitates some research to reach a viable solution.

A **statement of the problem** is used in research work as a claim that outlines the problem addressed by a study. The statement of the problem briefly addresses the question: What is the problem that the research will address?

The ultimate goal of a statement of the problem is to transform a generalized problem (something that bothers you; a perceived lack) into a targeted, well-defined problem; one that can be resolved through focused research and careful decision-making.

Writing a statement of the problem should help you clearly identify the purpose of the research project you will propose. Often, the statement of the problem will also serve as the basis for the introductory section of your final proposal, directing your reader's attention quickly to the issues that your proposed project will address and providing the reader with a concise statement of the proposed project itself.

A statement of problem need not be long and elaborate: one page is more than enough for a good statement of problem.

A good research problem should have the following characteristics:

1. It should address a gap in knowledge (value addition),
2. It should be significant enough to contribute to the existing body of research,
3. It should lead to further research (academic merit),
4. The problem should render itself to investigation through collection of data (professional merit),
5. It should be of interest to the researcher and suit his/her skills, time, and resources (added value) and
6. The approach towards solving the problem should be ethical.

A persuasive statement of problem is usually written in three parts:

Part A (The ideal): Describes a desired goal or ideal situation; explains how things should be.

Part B (The reality): Describes a condition that prevents the goal, state, or value in Part A from being achieved or realized at this time; explains how the current situation falls short of the goal or ideal.

Part C (The consequences): Identifies the way you propose to improve the current situation and move it closer to the goal or ideal.

c) Justification/significance of the study

Indicate or give justification of the study. What makes it worth?

Indicate the beneficiaries showing how the results of the study research will influence theories or practice.

Justify the need for the study while identifying the gaps in knowledge in comparison to the previous research if any.

Indicate any lack of information concerning the problem while presenting supportive statements of other studied researches.

d) Objectives of the Study

Research objectives describe concisely what the research is trying to achieve. They summarize the accomplishments a researcher wishes to achieve through the project and provides direction to the study.

A research objective must be achievable (attainable), i.e., it must be framed keeping in mind the available time, infrastructure required for research, and other resources. It should also be clear (avoid ambiguity), measurable (dimensional), realistic, have added value and academic and professional merit (i.e. usable), appropriate (each objective is clearly related to what you want to study), distinctive (each objective is focused and incrementally assists in achieving the overall research aim)

In creating research objectives that conform to the above, you may want to consider: Starting each objective with a key word (e.g. identify, assess, evaluate, explore, examine, investigate, determine, etc.), beginning with a simple objective to help set the scene in the study, finding a good numerical balance – usually two is too few and six is too many, approximately 3-5 objectives.

e) Research Questions/Hypotheses

The MCD students can optionally choose to use either research questions or hypotheses which are;

Either,

A research question is an answerable inquiry into a specific concern or issue. It is the initial step in a research project. The initial step means after you have an idea of what you want to study, the research question is the first active step in the research project.

It is the ground beneath the foundation. It is what everything in a research project is built on. Without a question, you can't have a hypothesis. Without the hypothesis, you won't know how to study what you're interested in.

A research question forms the base of where you are going, so we have to write a good research question. If your foundation is built on something shifty, like a house built on sand, then everything following that will be about correcting that initial issue instead of on making an awesome home/research project.

Writing a good research question means you have something you want to study. Specify your specific concern or issue

- Decide what you want to know about the specific concern or issue
- Turn what you want to know and the specific concern into a question
- Ensure that the question is answerable
- Check to make sure the question is not too broad or too narrow

This is the basic process in writing a research question. Writing a good question will result in a better research project.

Or

A hypothesis is a specific, testable prediction. It describes in concrete terms what you expect will happen in a certain circumstance.

A hypothesis is used in an experiment to define the relationship between two **variables**. The purpose of a hypothesis is to find the answer to a question.

The first variable is called the independent variable. This is the part of the experiment that can be changed and tested. The independent variable happens first and can be considered the cause of any changes in the outcome. The outcome is called the dependent variable. The independent variable is the variable that you are using to measure outcome is your test score.

The hypothesis is testable because you will receive a score on your test performance. It is measurable because you can compare test scores received from when you did study and test scores received from when you did not study.

A hypothesis should always:

- i) Explain what you expect to happen
- ii) Be clear and understandable
- iii) Be testable
- iv) Be measurable
- v) And contain an independent and dependent variable

- a) Null Hypothesis – This shows that there is no contradiction or significant difference between the ideal and reality
- b) Alternative Hypothesis – This shows that there is a contradiction or significant difference between the ideal and reality.

f) Scope and Limitations of the Study

Each research should have a boundary. It has to indicate clear and specific areas to which the conclusions will be confined.

Limitations of the study should also be forecasted whilst suggesting ways to curb them as well.

g) Conceptual Framework

Whenever one of them, either theoretical or conceptual framework is used, the other may not necessarily be required to be employed. However, when they are used, they should clearly capture the title and problem of the study. Theoretical/conceptual framework serves as the window or a picture through which the study is approached or seen.

h) Ethical Considerations: Explain briefly steps to be taken/taken in securing;

- i) A letter of introduction from the Institute
- ii) Permission from all possible authorities allowing you to conduct a research
- iii) Comprehending and apprehending other situations in a study area accordingly

3.1.2 Chapter Two: Literature Review

a) Review of Related Literature(s)

Literature review should point out the theoretical basis of proposed study which eventually will help build further understanding of the forecasted problem. The review helps bridging up the proposed research with the past researches conducted. The review should be convincing that enough knowledge has been captured. Divide this section into themes for clarity. Literatures used should include adequate current materials

i) Theoretical Literature:

Include general information about the study (books, professional journals reports etc). It has to include the theory or frameworks or approaches guiding the proposed research.

ii) Empirical Literature:

Include books, articles websites, reports etc that have presented information about similar study regionally, nationally or internationally. Show how others approached similar studies explaining gaps identified and questions left unanswered.

iii) Policy Review: Include policies, *memoranda*, protocols and agreement at both national, regional and international level, related with the study.

3.1.3 Chapter Three: Methodology

The chapter has to be introduced. This is an overview of what is intended to be covered as related to the topic. Methods should be focused on the following;

- a) Research Design (type and reason of choice),
- b) Study Area (reason of choice and data or literature support),
- c) Study population,
- d) Population Sample (method of determination and reason),
- e) Sampling Procedure (methods and data or literature support),
- f) Methods of Data Collection (types of data, methods of data collection, reasons for choice and data sources),
- g) Data Analysis (methods of data analyses, models to be used and reasons) and
- h) Ethical considerations.

3.1.4 Research Budget

- a) Come up with budget after the end of your proposal,
- b) Include a tentative financial budget to be used,
- c) Indicate type of items and services required for the implementation of the stated research e.g.; subsistence, transport, consumables, questionnaire administration, research assistants, conferences, etc.

3.1.5 Research action plan

NB:

- Writing of research proposal will include chapter 1 – 3 only.
- Proposals should use future tenses.
- The length of proposals should not be more than 20 pages and not less than 15 pages.
- Literature sources used should be between 20-25.
- Students will be required to defend their proposals before the panel for further step.

PART B: TYPESCRIPTS AND LAYOUT

It is well known and accepted that there is no specific format for the body of the dissertation. Researchers at master's level in this context together with their supervisors should ensure that the body follows the agreed convention of Tengeru Institute of Community Development; Department of Postgraduate Studies, Research and Consultancy:

1.0 Components of the dissertation

Normally, the body should contain Chapter One: It consists of the following chapters:

1. Preliminary pages (copy right, declaration, dedication, acknowledgement, abstract, table of contents, list of abbreviations/ acronyms, list of tables/figures/appendices,)
2. Chapter One: Introduction
3. Chapter Two: Review of Related Literature
4. Chapter Three: Methodology
5. Chapter Four: Presentation, Analysis and Discussions of the Findings
6. Chapter Five: Conclusions and recommendations

In view of the above, apart from chapter 1 – 3, being presented in research proposal writing, those chapters will also be re-edited, improved, paraphrased (where necessary) and restructured and included in dissertation report. However, they should be change of tenses from future to past should be considered in order to fit into a status of a research that has already been conducted and presented in a written report.

2.0 Sequence of the Research report (dissertation)

Dissertation should therefore be sequenced as follows:

2.1 Preliminary pages

- a) Title page: Title of the study, author of the study, type of certification requirement and date (year) all written in capital letters
- b) Abstract: (written on one page, in a single paragraph). It should briefly reflect; background of the study, statement of the problem, objectives, methodology, findings, and recommendations
- c) Declaration and signature of the supervisor(s): There should be a space for the researcher to write a statement of declaration that he/she owns the work, and that it has not been submitted for a similar degree in any other University/institution
- d) Copyright
- e) Acknowledgment and dedication if any: The candidate should include institutions and people who supported in the completion of the study

- f) Table of contents
- g) List of abbreviations, acronyms and symbols, tables, figures and appendices

3.0 Dissertation topic

3.1 Location of Titles and sub-titles

Titles and sub-titles should be written in the order of their appropriate levels and location. They should also be indicated where topics, and possibly sub-topics can be found in the document

3.2 The dissertation Topic Length

The length of the dissertation topic should not exceed 20 words. The topic for the dissertation should be topical (discussable and current), usable (have acceptable usability index - UI), specific (focused), have value addition and academic and professional merit as fall within the institute (TICD) research agenda.

4.0 Chapter Four: Data Presentation, Analysis and Discussions

Present results after analysis. They could be in tables or graphics. Describe whether the treatment effects were significant or not.

Correlations can be carried out to show the relationships between two or more variables.

State whether the results are in agreement or contrary to the stated study hypotheses.

Numbering of tables should take effect based on the sequence from the first table to the last one eg Table 1.....20.

Any table exceeding more half a page should be placed on a separate page.

Table captions in bold letters have to be placed above them only the first letter of the caption being capitalized.

Acknowledge the source usually below the table e.g. Source: Kingu (2019), or Field data (2019).

5.0 Chapter Five: Conclusions and Recommendations

5.1 Conclusion(s)

A conclusion is the last paragraph in your dissertation, or the last part in any other type of presentation.

Draw conclusions and provide recommendations from your results and discussions. They should point to areas that require action by policy makers or program designers. Further areas of research that need to be pursued should be highlighted.

A conclusion is, in some ways, like your introduction. You restate your dissertation and summarize your main points of evidence for the reader. You can usually do this in one

paragraph. In the following example, the dissertation statement is in **bold**. Notice that it is written in 2 to three sentences.

e.g. The problem of teen gang violence can be eliminated. It will, however, take time, money, and a combined effort on the part of many people. Organized, free, after-school programs such as: sports teams and games; art, music, and drama activities; internships in local area businesses and professional organizations; and interesting volunteer activities in the community would help engage teens in worthwhile pursuits outside of school hours. More job opportunities for teens, especially those funded by state and local programs, would offer income for teens as well as productive work for the community. Outreach to families through schools, community organizations, and places of worship would help promote inter-generational activities that could improve family closeness, helping teens to work on their problems at the family level, instead of taking them to the streets. If these programs can be implemented, we will surely see a decrease in teen gang activity and safer streets and neighborhoods for us all.

Writing a conclusion is important. The conclusion is that last thing that the examiner reads before they write their report, and it can shape their attitude to the entire dissertation.

A dissertation conclusion generally:

- i) Restates the question
- ii) Provides a succinct summary of the answer(s) and how this was produced (I did this and my analysis showed 1, 2, 3 and I argue that this...). The writer usually acknowledges the particularity of the research here too (sometimes called limitations.)
- iii) Shows how the research contributes to the literatures (the contribution of the research is a, b, c)
- iv) Discusses the implications (the results could lead to further research on, changes in policy/practice such as..). The implications arise logically from the particularity of the study and its results – they point to questions the study opens up, what the results says to current thinking about and acting on the topic.

5.2 Recommendations

The purpose of a recommendations section is to offer the reader some advice on what you think should happen next. Failing to include such information can result in the loss of awards. Including these recommendations as implicit suggestions within other parts of the brief (e.g. the analysis/discussion chapters) is a good start.

There are two types of recommendations you can make. The first is to make a recommendation that is specific to the evidence of your study; the second is to make recommendations for future research.

Note also that, conclusions and recommendations;

- i) Must be clearly stated

- ii) Must be relevant to research objectives and research questions
- iii) Must indicate issues such as unresolved questions and new questions if any
- iv) State theoretical, policy or practical recommendations. Student shall defend his/her findings before an appointed panel by the Head of Department – Postgraduate Studies, Research and Consultancy before the external examination of the dissertation.

PART C: Formatting and Referencing Guideline

1.0 Type-setting the dissertation

- i) Should be typewritten or word-processed,
- ii) Double spaced only on one side of the paper,
- iii) Must be written in English language (Great Britain), well spelled by the help of spell checker, dictionaries, software, and or proof reader personnel and plagiarism checker.
- iv) Preliminary pages should be written in lower case using Roman numerals avoiding indicating the page number on the title page
- v) Arabic numerals are indicated in the body below and at the centre

1.2 References or literature cited

- a) List all references should be cited in full at the end of the text, and not as footnotes to the text pages, tables or figures,
- b) The references should be arranged alphabetically by authors. All authors, surnames and initials should be included (i.e. never use et al), followed by the year of publication in parentheses; a full stop, the title of the paper; report; book; etc. (as used in the original document and should not be abbreviated), the journal volume number; the issue number (only if the pagination starts afresh in each issue concerned). If the reference is to a book, the town of publication, the publisher, the edition number (if not the first) should be added. Journal and book titles should be underlined or italicized.

1.3 Citations in the Text

Different sources may be used. Candidates are advised to use APA style. General rules include, but not limited to the following:

- a) Cite references by author's name followed by year of publication, with a separating comma, e.g. (Bakari, 2019),
- b) For multiple authorship reference cite up to two. For more than two, cite the first mentioned, followed by et al., (italicized) meaning and others, but cite them in full in the list of references
- c) Citations in the text should take in the following forms:
 - i) ...have been reported by Sewando et al. (2018)
 - ii) ...Malima and Mhango (2019) found that....
 - iii) ...other results (Kingu and Luanda, 2017; Mkande, 2018) have found that...

- iv) ...Kipanya and Msuya (2017, 2019) found that ...(for papers published by the same author in two different years.
- v) ...Mkenge (2017 a, b)...(two papers published by the same author in the same year)
- d) To refer to personal communication relating to unpublished material, personal communication etc., use the form ,, (Magombola, personal communication 2018)
- e) Secondary citations can take the form ...Watts (2016), cited by Makombe, et al. (2019)

1.4 Citations in list of references

- a) Cite references in alphabetical order of author (s) and in order of year of publication.
- b) For references with same author(s) and year of publication, start with paper by the same author being arranged in the order of (1) single author, (2) two authors alphabetically according to the name of the second author, and (3) several authors chronologically with 1981a, 1981b, etc. for papers published in the same year.
- c) Reference by one author take precedence over references by the same plus additional authors irrespective of the year of publication.
- d) Avoid using Anon or Anonymous where possible. Where no name of an author is given, use the name of the sponsoring or issuing organization, ministry, department etc. if it can be identified.
- e) Separate authors by semi-colons.

1.5 Order of citation details

The following guidelines and examples are designed to show main elements that should be cited and the order in which they should appear in references for the three main classes of publication most likely to need inclusion in list of references.

- a) Journals
 - Author's name(s) and initials for forenames;
 - Year of publication in brackets; followed by a period/full stop
 - Title of published paper;
 - Name of journal or publication; spelt in full, omitting any definite article {i.e. the} at the beginning, and underlined; or in italics throughout.
 - Volume and / or issue number;

- First and last page numbers {in full} for journal papers; total number of pages for publications referred to as a whole.
- b) Books
 - Author's or editor's name{s} and initials, name of sponsoring or organization or corporate body in the absence of a named individual author or editor;
 - Year of publication in brackets, followed by a period/full stop;
 - Title of the book to be underlined or in italics;
 - Name of publisher and town in that order;
 - Total number of pages in the form: 250pp.
- c) Individual chapters in multi-authored books
 - Author's name(s) and initials;
 - Year of publication in brackets; followed by a period / full stop;
 - Title of chapter or article, followed by the word in;
 - Title of book underlined or in italics;
 - The words 'Edited by' followed by the name(s) and initials of the editor(s) of the publication , underlined and enclosed in brackets;
 - Name of publisher and town, in that order;
 - First and last page numbers of chapter, article, part, or section,; pp. 18-24.
- d) One page in multi-authored books
 - Author's name{s} and initials;
 - Year of publication in brackets; followed by a period / full stop;
 - Title of article, followed by the word in;
 - Title of book underlined or in italics;
 - The words 'Edited by' followed by the name(s) and initials of the editor(s) of the publication , underlined and enclosed in brackets;
 - Name of publisher and town, in that order;
 - First and last page numbers of article, p. 250.
- e) Proceedings of conferences/workshops/monographs
 - Author's name{s} and initials;
 - Year in brackets; followed by a period / full stop;
 - Title of proceedings or workshop underlined or italics
 - Name of Editor(s) in brackets
 - Date of the conference town; country; vol.(if any); page numbers
 - First and last page numbers of article; pp. 180-210.
- f) Dissertation and Theses
 - Author's name(s) and initials;
 - Year in brackets; followed by a full stop;
 - Title of dissertation;

- Name of the host institution;
- Total number of pages;
- g) Citing from electronic sources
 - Author's name(s) (if no author begin with title of the articles)
 - Publication date (in brackets);
 - Title of the article;
 - Internet address in square brackets [];
 - Date of visit to the website;

1.6 Examples of Citation Layouts

The following examples show how to set out the details needed for the main types of literature listed above; .note the punctuation; words to be printed in italics script or to be underlined.

a) Journal paper in English

Rubega, Y.J.K. (1997). Climate change response of groundnut to plant population density. *African Crop Science Journal* 5:267 – 272.

Temu, A.E. and Due, J.M. (2000). The business environment in Tanzania after Socialism: challenges of performing bank, parastatal, taxation and the civil service. *Journal of Modern African Studies* 38 (4): 683-712.

b) Journal paper not in English

Nunes, E. (1985). Investigacao recente sobra as principais factor queimitam a producao do milho em Mozambique. {a recent investigation of the main factor limiting sorghum production in Mozambique}. *Agricultural Boletim Tecnica* 8:4-10.

c) Journal paper accepted for publication but still in press

Sones, K.R. (In press). Yield targeting in rabi sorghum. *Journal of Agronomy*.

d) Books

Stocker, L. (2000). Practical wildlife care for veterinary Nurses, animal care students and rehabilitators. Blackwell Science Ltd., Oxford.288pp.

e) Edited Books

Hulme, D. and Murphree, M. (Eds.) (2001). African wildlife and livelihoods: the promise and performance of community conservation. James Currey Ltd, oxford, 336pp.

f) Individual chapters in multi-authored books

Barrow, E., Gichohi, H. and Infield, M. (2001). The Evolution of Community Conservation Policy and Practice in East Africa. In: African Wildlife and Livelihoods: The Promise and Performance of Community Conservation. (Edited by Hulme, D. and Murphree, M.), James Currey Ltd. Oxford. PP. 59-73.

g) Conference or workshop proceeding referred to as a whole

Boyle, P.J. (Ed.) (1987). Appropriate Manpower for Agricultural Research. Proceeding of SADCC Workshop, Gaborone, Botswana, 25 November, 1985. 120pp.

h) Individual paper in a conference or workshop

Ishengoma R.C. and Mugasha, A. G. (2000). Trends and accomplishments of research in forestry and nature conservation at SUA 1996- 2000. In; proceedings of the First university-wide scientific conference. (Edited by Matovelo, J. A et al.), 5-7 April 2000, Morogoro, Tanzania. 28-59pp.

i) Monographs

United States Agency for International Development (2000). Rice Production in Africa. Afriserve Ltd., New York, 150pp.

k) Annual report

Botswana Ministry of Agriculture (1999). Livestock Research in Botswana Annual Report. Government Printer, Gaborone, Botswana, 10pp.

l) Dissertations and Thesis

Maskini, M.S. (2000). Spatial and temporal grazing patterns of livestock and wild herbivores at Ngorongoro Conservation Area. Dissertation for Award of MSc Degree At Sokoine University of Agriculture, Morogoro, Tanzania, 137pp.

m) Citing from electronic source

Kimbell, A., (May, 2002). Fatal Harvest: the tragedy of industrial agriculture. [<http://www.fatalharvest.org/press.htm>] site visited on 9/8/2019.

n) Citing newspaper articles and other reports

Kisembo, P. (2006). Survey shows food price further going down in dare salaam. Daily news, issue No 36000. P.13. Preferably articles cited from newspapers should be more of feature articles than otherwise

PART D: The Process of Dissertation Submission

- a) It is advised that students should submit their unbound dissertation to the secretariat of the Post Graduate, Research and Consultancy Committee for checking before sending it for hard binding for error free certificate.
- b) After certification by the supervisor that the candidate has satisfactorily incorporated all the recommended corrections, he/she shall submit four hard bound copies and one electronic copy of the dissertation to the secretariat of the Post Graduate, Research and Consultancy Committee. Each hard bound copy shall be bound black.
- c) The spine shall be embossed in gold, bearing;
 - i) the surname and initials of the candidate,
 - ii) the acronym for the degree programme for which the dissertation is being submitted and
 - iii) the year of the degree award.
- d) The writing on the spine shall read from the bottom to the top.
- e) The title of the work shall be printed in gold letters on the front cover of the bound volume.

d) Grading of Master's Proposals and Dissertation

All master's proposal and dissertation shall be supervised, orally defended and graded as follows;

- | | |
|--|------------|
| i) Proposal defense | (20 Marks) |
| ii) Supervisor's evaluation | (20 Marks) |
| iii) Final dissertation defense | (40 Marks) |
| iv) External examination of dissertation draft | (20 Marks) |

e) Change of Supervisor and/or Supervisee (as an approach to conflict resolution)

Conflicts do arise at times within the supervisory arena. However, conflict should not be allowed to arise for the sake of it. They should not be considered as terminal point. The imperative is that all noted troubling issues need to be brought to the table and dealt with accordingly in an amicable way.

All efforts should be employed at an early stage before they are exposed to leading to deterioration of the working relationship. Initially, the resolution, at the earliest stage possible should take place between the student and the supervisor. However, due to the fact of power imbalance between the two parties, student may feel uncomfortable to approach the supervisor, or if the supervisory relationship may have deteriorated to the point at which the likelihood of resolution at this informal stage is farfetched, the following procedures should be considered;

- Upon receiving the report in writing, the Head of Department of Postgraduate Studies is held responsible for providing academic counsel to the affected.
- The HoD, can, at this point serve as the initial point of contact to the student and or supervisor in seeking for resolution
- The HoD also, as the case may be, can involve another member of academic committee or higher authority in soliciting for a better way forward
- In some cases, it may be the best interest of the student to have a new supervisor appointed. Therefore, the HoD and or the member of academic committee but in consultation with the student can do so.
- Appointing a new supervisor under normal circumstances should be done without penalty or disadvantage to the graduate student.

f) Research format

All research proposals and research dissertation will be written using **APA** approach

Paper size	A4
Font Type	Times New Roman
Font Style	Normal
Font Size	14 for headings, 12 for text
Left Margin	4 cm, or 1 inch
Right Margin	2.54 cm, or 1 inch
Top Margin	4 cm, or 1 inch
Bottom Margin	2.54 cm, or 1 inch
Header	1.27 cm, or 0.5 inch
Footer	1.27 cm, or 0.5 inch
Line Spacing	2 (according to APA style)

g) Other reminders;

- A complete final draft should be a minimum of 75-80 pages excluding preliminary pages
- 5 Spring bound copies will be submitted for examination thereafter defense will be performed
- It is the student's initiative to find a competent person who will proofread the work, taking care of grammar, sentence construction, word choice, use of punctuation marks etc. The supervisor, though, in his/her own jurisdiction can see it wise helping and advising, but may not necessarily be obligated to take up this work.
